Goals

The data points below represent a percentage of trials and/or a total frequency.

Sury Rosenberg added a data point 100.00 to Client will tact an action to increase tact skills for 09/24/2026.

Sury Rosenberg added a data point 50.00 to Client will increase their listener responding skills and respond to hearing his own name by verbally saying "yes" for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will increase their listener responding skills and perform 5 motor actions on command for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will increase visual perception skills and complete and inset puzzle with 8 pieces for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will increase visual perceptions skills and turn the page of the book when finished reading a page for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will increase imitation skills and imitate 5 gross motor movement when prompted with , Do this for 09/24/2026.

Sury Rosenberg added a data point 40.00 to Client will increase imitation skills and imitate 4 fine motor movement when prompted with , Do this for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will increase tolerating transition and pack away 1 material from an activity given a cue that an activity is over for 09/24/2026.

Sury Rosenberg added a data point 66.67 to Client will increase visual perceptual skills by copying a 1-step modeled craft activity (e.g., coloring the bus yellow, placing matching pieces, or gluing items in the correct location) following a visual demonstration for 09/24/2026.

Sury Rosenberg added a data point 0.00 to Client will communicate the need to use the bathroom with a verbal prrompt (e.g., by saying "I need to use the bathroom," "potty," "toilet," or using another approved functional communication response) before initiating elimination for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will completes an open-ended activity with behavior tech for 5 min for 09/24/2026.

Sury Rosenberg added a data point 100.00 to Client will completes a closed-ended activity with behavior tech for 5 minutes for 09/24/2026.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"Client will completes a closed-ended activity with behavior tech for 5 minutes", patient required no prompting with this goal. "Client will completes an open-ended activity with behavior tech for 5 min", patient required no prompting with this goal. "Client will communicate the need to use the bathroom with a verbal prrompt (e.g., by saying "I need to use the bathroom," "potty," "toilet," or using another approved functional communication response) before initiating elimination", patient required verbal prompting with this goal. "Client will increase visual perceptual skills by copying a 1-step modeled craft activity (e.g., coloring the bus yellow, placing matching pieces, or gluing items in the correct location) following a visual demonstration", patient required modeling with this goal. " Client will increase tolerating transition and pack away 1 material from an activity given a cue that an activity is over", patient required no prompting with this goal. " Client will increase imitation skills and imitate 4 fine motor movement when prompted with , Do this", patient required modeling with this goal. " Client will increase imitation skills and imitate 5 gross motor movement when prompted with , Do this", patient required no prompting with this goal. "Client will increase visual perceptions skills and turn the page of the book when finished reading a page", patient required no prompting with this goal. "Cient will increase visual perception skills and complete and inset puzzle with 8 pieces", patient required no prompting with this goal. "Client will increase their listener responding skills and perform 5 motor actions on command", patient required no prompting with this goal. "Client will increase their listener responding skills and respond to hearing his own name by verbally saying "yes" ", patient required verbal prompting with this goal. "Client will tact an action to increase tact skills ", patient required no prompting with this goal.

Joseph engaged with session for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Joseph responded well to the ABA techniques used during this session.

Please indicate any additional relevant information.

Plan of Care: Continue behavior analytic treatment as prescribed

Session Narrative:

The following sections were completed in preparation for Daniel's reassessment report:

- **Transition Plan and Criteria:** Reviewed Daniel's current treatment plan and incorporated clinically appropriate goals into the transition plan, including corresponding discharge mastery criteria to support a gradual reduction in ABA services.
- **Discharge Plan and Criteria:** Developed the discharge plan and established measurable mastery criteria addressing maintenance, generalization, functional independence, and reduction of clinically significant interfering behaviors.

Further clinical details can be found on the patient's comprehensive Treatment Plan.

Content of Therapy Session:

Parent Goals Addressed:

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session.

Additionally, the data points below represent a percentage of trials and/or a total frequency.

Cindy Rodriguez-Sumner added a data point 75.00 to Parent will teach Daniel to appropriately initiate bathroom requests by independently activating the toilet icon on his AAC device for 09/24/2026.

Cindy Rodriguez-Sumner added a data point 1:30 to Parent will implement a graduated desensitization protocol to increase Daniel's tolerance for wearing noise-reducing headphones for two minutes for 09/24/2026.

Cindy Rodriguez-Sumner added a data point 66.67 to Parent will create opportunities to teach and reinforce appropriate attention-seeking behaviors by prompting and reinforcing Daniel's use of functional communication (vocalization of "mom" and/or selection of the "mom" icon on his AAC device) for 09/24/2026.

Cindy Rodriguez-Sumner added a data point 3:08 to Parent will increase Daniel's tolerance of non-preferred activities for at least 5 minutes for 09/24/2026.

Cindy Rodriguez-Sumner added a data point 75.00 to Parent will create opportunities to promote generalization of "yes" and "no" responding, utilizing Daniel's AAC device and/or functional hand gestures for 09/24/2026.

Specific Feedback Provided:

The BCBA reviewed and demonstrated ABA strategies, including reinforcement procedures, prompting and prompt fading, shaping, differential reinforcement, and redirection of mouthing behavior. Emphasis was placed on the immediate delivery of reinforcement and behavior-specific verbal praise for independent functional communication, spontaneous manding, task completion, and following instructions upon the first request. The BCBA demonstrated strategies for gaining Daniel's attention and establishing motivation prior to presenting instructional demands to increase compliance during daily routines.

In response to Ms. Cazi's concerns regarding Daniel's inability to independently put on his jacket, the BCBA discussed adding a parent training goal targeting this adaptive skill and developing a shaping procedure to reinforce successive approximations toward independent jacket dressing. The BCBA modeled the procedure, including appropriate prompting, systematic prompt fading, and differential reinforcement.

The BCBA also reviewed strategies for creating and contriving opportunities for functional communication using the AAC device to request toileting, preferred items, activities, and parental attention. Echoic-to-mand transfer procedures were reviewed to promote Daniel's ability to verbally request his mother by saying "mom." Additional parent training goals reviewed included responding to yes/no questions using the AAC device or thumbs-up/down gestures, implementing graduated exposure to increase tolerance of noise-reducing headphones, and using reinforcement and prompting to increase participation in non-preferred activities.

Parent Progress in Parent Goal Implementation:

Patient Name: Daniel Cazi **Patient DOB:** 07/23/2018 **Date of Service:** 09/24/2026 **Service Code:** Family Adaptive Behavior Treatment

Guidance

Insurance: Healthfirst Medicaid **Insurance ID:** YM16135B

Ms. Cazi actively participated in parent training through discussion, observation, and rehearsal of the demonstrated intervention strategies. She practiced implementing the shaping procedure for jacket dressing, including differential reinforcement of successive approximations, appropriate prompting, and systematic prompt fading to promote independence. She also rehearsed creating and contriving manding opportunities using the AAC device and implementing reinforcement procedures to strengthen spontaneous functional communication.

Ms. Cazi reported that Daniel has demonstrated increased tolerance of non-preferred activities for longer periods without engaging in avoidance behaviors. She demonstrated an understanding of the importance of immediately reinforcing independent responses, functional communication, and compliance with instructions during daily routines. Continued parent training will focus on increasing consistency and independence in implementing reinforcement, shaping, prompt fading, functional communication training, and graduated exposure procedures across home and community settings.

Parent understood targets/interventions: Yes

Barriers to Treatment: No

Additional Information: No

Plan of Care:

Continue behavior analytic treatment as prescribed.

Goals

The data points below represent a percentage of trials and/or a total frequency.

Gitty Rolnitzky added a data point 80.00 to To decrease maladaptive behavior, client will implement prevention by requesting preferred items or activities using a picture with a prompt for 09/24/2026.

Gitty Rolnitzky added a data point 16.00 to Client will increase frequency of prompted mands per session - target 25 for 09/24/2026.

Gitty Rolnitzky added a data point 4.00 to To increase echoing, client will increase frequency of vocalization during social interaction or play for 09/24/2026.

Gitty Rolnitzky added a data point 3.00 to Client will decrease the frequency of screaming occurrences per session - record how many min tantrum was for 09/24/2026.

Gitty Rolnitzky added a data point 0.00 to To increase echoing client will echo the eeh sound for 09/24/2026.

Gitty Rolnitzky added a data point 12.00 to Client will increase frequency of mands - spontaneous mands for 09/24/2026.

Gitty Rolnitzky added a data point 80.00 to To increase imitation, client will imitate 20 different motor movements when modeled for 09/24/2026.

Gitty Rolnitzky added a data point 100.00 to To increase manding, client will mand/sign for "open," both hands flat with palms facing, moved apart for 09/24/2026.

Gitty Rolnitzky added a data point 80.00 to To increase following directions, client will follow mastered directions independently for 09/24/2026.

Gitty Rolnitzky added a data point 75.00 to To increase following directions, client will follow new directions with only one prompt for 09/24/2026.

Gitty Rolnitzky added a data point 75.00 to To increase following directions, client will follow directions to a location outside of the room for 09/24/2026.

Gitty Rolnitzky added a data point 66.67 to To decrease latency, client will respond to new directions without needing the direction repeated or partially completed for 09/24/2026.

Gitty Rolnitzky added a data point 71.43 to To decrease latency, client will respond to mastered directions promptly without repeated prompts for 09/24/2026.

Gitty Rolnitzky added a data point 66.67 to To decrease repeated asking, client will accept "not now"/"wait" after being told once, without re-requesting the same item within 30 sec - set timer for 09/24/2026.

Gitty Rolnitzky added a data point 100.00 to To increase manding, client will mand/sign for "all done," both hands up with palms out, flipped outward for 09/24/2026.

Gitty Rolnitzky added a data point 80.00 to To increase manding, client will mand/sign for "up," palms open moving upward for 09/24/2026.

Gitty Rolnitzky added a data point 75.00 to To increase manding, client will mand/sign for "music" + sound, pointer finger in a circular motion for 09/24/2026.

Gitty Rolnitzky added a data point 2.00 to Client will decrease the frequency of biting self/hand in mouth for 09/24/2026.

Gitty Rolnitzky added a data point 33.33 to To increase tolerance, client will tolerate when attention is diverted - 1.5 min - in the absence of problem behavior NO warning before for 09/24/2026.

Gitty Rolnitzky added a data point 50.00 to Client will complete a transition in the same room without doing something else for 09/24/2026.

Gitty Rolnitzky added a data point 75.00 to Client will complete a transition out in the hallway without stopping or going somewhere while transitioning for 09/24/2026.

Gitty Rolnitzky added a break entry called "Maintenance" from 9/24/2026 12:23 PM to 9/24/2026 12:23 PM to data tracking **To increase manding, client will mand/sign for \"open,\" both hands flat with palms facing, moved apart** part of Shimon Drummer's learning tree **Shimon Drummer**.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"Client will complete a transition out in the hallway without stopping or going somewhere while transitioning ", patient required verbal prompting with this goal. "Client will complete a transition in the same room without doing something else", patient required verbal prompting with this goal. "To increase tolerance, client will tolerate when attention is diverted - 1.5 min - in the absence of problem behavior NO warning before", patient required verbal prompting with this goal. "Client will decrease the frequency of biting self/hand in mouth ", patient required verbal prompting with this goal. "To increase manding, client will mand/sign for "music" + sound, pointer finger in a circular motion", patient required indirect verbal prompting with this goal. "To increase manding, client will mand/sign for "up," palms open moving upward", patient required indirect verbal prompting with this goal. "To increase manding, client will mand/sign for "all done," both hands up with palms out, flipped outward", patient required no prompting with this goal. "To increase manding, client will mand/sign for "open," both hands flat

with palms facing, moved apart", patient required no prompting with this goal. "To increase imitation, client will imitate 20 different motor movements when modeled", patient required no prompting with this goal.

Shimon engaged with session for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Shimon responded well to the ABA techniques used during this session.

Plan of Care: Continue behavior analytic treatment as prescribed

Goals

The data points below represent a percentage of trials and/or a total frequency.

Chaya Weisz added a data point 7.00 to Client will decrease frequency of Making groaning sounds, saying no, asking questions to do another task, and standing up and moving around for 09/24/2026.

Chaya Weisz added a data point 100.00 to To increase identifying emotions in others, when para shares a scenario for 09/24/2026.

Chaya Weisz added a data point 66.67 to To increase emotions , client will use a verbal phrase to indicate her own emotional state when prompted - only when a situation occurs for 09/24/2026.

Chaya Weisz added a data point 50.00 to To increase generalization, client will state one emotion that she experienced that day outside of session for 09/24/2026.

Chaya Weisz added a data point 50.00 to To increase functional communication, client will speak while keeping appropriate pace, producing one word at a time when needed for 09/24/2026.

Chaya Weisz added a data point 60.00 to To decrease latency client will start a less preferred task within 2 min without any prompting for 09/24/2026.

Chaya Weisz added a data point 100.00 to To increase self-monitoring client will tact one way to correct her sentence (slower, louder, point) for 09/24/2026.

Chaya Weisz added a data point 100.00 to To increase self-monitoring client will correct her sentence (slower, louder, point) for 09/24/2026.

Chaya Weisz added a data point 62.50 to To increase self-monitoring skills, client will tact when she has made a mistake or when something is not working and attempt to correct it for 09/24/2026.

Chaya Weisz added a data point 100.00 to To decrease latency, client will begin tasks within 1 minutes of instruction without BT prompts. for 09/24/2026.

Chaya Weisz added a data point 75.00 to To increase ability to maintain attention to task, client will remain engaged in a task for 10 minutes without off-task behavior while BT is involved in the task. for 09/24/2026.

Chaya Weisz added a data point 83.33 to To increase ability to maintain attention to task, client will remain engaged in a task for 5 minutes without off-task behavior INDEPENDENTLY for 09/24/2026.

Chaya Weisz added a data point 75.00 to To increase task completion, client will complete tasks (up to 5 min) without asking BT for help or waiting for BT to prompt her for 09/24/2026.

Chaya Weisz added a data point 100.00 to To increase following directions client will complete the direction after repeating the direction for 09/24/2026.

Chaya Weisz added a data point 40.00 to To increase functional communication, client will speak at an audible volume without a prompt for 09/24/2026.

Chaya Weisz added a data point 66.67 to To increase self-regulation, client will independently implement one strategy (slowing down, pausing between words) during conversation. for 09/24/2026.

Chaya Weisz added a data point 25.00 to To increase functional communication, client will ask "Did you understand me?" or use a visual/gesture cue when a listener does not respond clearly. for 09/24/2026.

Chaya Weisz added a data point 66.67 to To increase functional communication, client will use the check-for-understanding strategy during structured 1:1 activities with adult prompting. for 09/24/2026.

Chaya Weisz added a data point 66.67 to To increase expressive language, client will learn and use new age-appropriate words presented in sessions with modeling. for 09/24/2026.

Chaya Weisz added a data point 71.43 to To increase speech clarity, client will say words more clearly during conversation so an unfamiliar adult will understand for 09/24/2026.

Chaya Weisz added a data point 62.50 to To increase functional communication, when the listener does not understand her, client will attempt a repair by slowing down, segmenting words, or using gestures with a prompt. for 09/24/2026.

Chaya Weisz added a data point 100.00 to To increase prevention client will engage in a sensory activity 2 times during session for 09/24/2026.

Chaya Weisz added a break entry called "Maintenance" from 9/24/2026 1:18 PM to 9/24/2026 1:18 PM to data tracking **To increase prevention client will engage in a sensory activity 2 times during session** part of Zeldy Ekstein's learning tree **Zeldy Ekstein**.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient transitioned well into today's session.

Some of the goals worked on today were:

"To increase self-monitoring skills, client will tact when she has made a mistake or when something is not working and attempt to correct it ", patient required least to most prompting with this goal. "To increase following directions client will complete the direction after repeating the direction ", patient required no prompting with this goal. "To increase self-

monitoring client will correct her sentence (slower, louder, point) ", patient required no prompting with this goal. "To increase self-monitoring client will tact one way to correct her sentence (slower, louder, point)", patient required no prompting with this goal. "To increase task completion, client will complete tasks (up to 5 min) without asking BT for help or waiting for BT to prompt her ", patient required least to most prompting with this goal. "To decrease latency, client will begin tasks within 1 minutes of instruction without BT prompts.", patient required least to most prompting with this goal. "To increase ability to maintain attention to task, client will remain engaged in a task for 5 minutes without off-task behavior INDEPENDENTLY", patient required least to most prompting with this goal. "To increase ability to maintain attention to task, client will remain engaged in a task for 10 minutes without off-task behavior while BT is involved in the task.", patient required least to most prompting with this goal. "To decrease latency client will start a less preferred task within 2 min without any prompting ", patient required least to most prompting with this goal. "To increase functional communication, client will speak while keeping appropriate pace, producing one word at a time when needed", patient required least to most prompting with this goal. "To increase generalization, client will state one emotion that she experienced that day outside of session ", patient required least to most prompting with this goal. "To increase emotions , client will use a verbal phrase to indicate her own emotional state when prompted - only when a situation occurs ", patient required indirect verbal prompting with this goal. "To increase identifying emotions in others, when para shares a scenario ", patient required least to most prompting with this goal. "To increase speech clarity, client will say words more clearly during conversation so an unfamiliar adult will understand ", patient required least to most prompting with this goal. "To increase functional communication, when the listener does not understand her, client will attempt a repair by slowing down, segmenting words, or using gestures with a prompt.", patient required indirect verbal prompting with this goal.

Zeldy engaged with session for the length of the session.

I utilized the reinforcement system today

Zeldy responded well to the ABA techniques used during this session.

Plan of Care: Continue behavior analytic treatment as prescribed

Goals

The data points below represent a percentage of trials and/or a total frequency.

Mordechai Friedman added a data point 5.00 to Nachmen will reduce frequency of Silly Behaviors to escape the conversation for 09/24/2026.

Mordechai Friedman added a data point 66.67 to Client will increase social skills and make one relevant reciprocal comment to therapist with a verbal prompt for 09/24/2026.

Mordechai Friedman added a data point 100.00 to Client will make one reciprocal relevant comment during conversation to a therapist with no prompt. for 09/24/2026.

Mordechai Friedman added a data point 66.67 to Client will make one reciprocal relevant comment to a peer with a prompt for 09/24/2026.

Mordechai Friedman added a data point 100.00 to Client will make one reciprocal comment to a peer without a prompt for 09/24/2026.

Mordechai Friedman added a data point 100.00 to Client will increase social skills and compliment a peer/behavior technician on a behavior – independently for 09/24/2026.

Mordechai Friedman added a data point 100.00 to To increase skills in nonverbal communication, client will state the jobs of the eyes in whole body listening for 09/24/2026.

Mordechai Friedman added a data point 100.00 to To increase skills in nonverbal communication, client will state the job of the mouth in whole body listening. for 09/24/2026.

Mordechai Friedman added a data point 66.67 to To increase skills in nonverbal communication, client will state the job of the hands in whole body listening. for 09/24/2026.

Mordechai Friedman added a data point 100.00 to To increase skills in nonverbal communication, client will respond when others look confused by clarifying what he/she said – independent for 09/24/2026.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

" To increase skills in nonverbal communication, client will respond when others look confused by clarifying what he/she said – independent", patient required no prompting with this goal. " To increase skills in nonverbal communication, client will state the job of the hands in whole body listening.", patient required positional prompting with this goal. " To increase skills in nonverbal communication, client will state the job of the mouth in whole body listening.", patient required no prompting with this goal. "To increase skills in nonverbal communication, client will state the jobs of the eyes in whole body listening", patient required partial physical prompting with this goal. "Client will increase social skills and compliment a peer/behavior technician on a behavior – independently", patient required visual prompting with this goal. "Client will make one reciprocal comment to a peer without a prompt", patient required modeling with this goal. "Client will make one reciprocal relevant comment to a peer with a prompt", patient required least to most prompting with this goal. "Client will make one reciprocal relevant comment during conversation to a therapist with no prompt.", patient required visual prompting with this goal. "Client will increase social skills and make one relevant reciprocal comment to therapist with a verbal prompt", patient required indirect verbal prompting with this goal. "Nachmen will reduce frequency of Silly Behaviors to escape the conversation", patient required least to most prompting with this goal.

Nachmen engaged with session for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Nachmen responded well to the ABA techniques used during this session.

Edibles

Goals

The data points below represent a percentage of trials and/or a total frequency.

Miriam Bleich added a data point 100.00 to Client will identify (listener responding) an item that is wet/ dry in a field of 2. for 09/24/2026.

Miriam Bleich added a data point 100.00 to Client will identify (listener responding) an item that is big/ small in a field of 2. for 09/24/2026.

Miriam Bleich added a data point 100.00 to To increase intraverbal skills client will be able to answer a question about two uses of the same item for 09/24/2026.

Miriam Bleich added a data point 75.00 to Match para voice volume – Client will match para voice volume for 09/24/2026.

Miriam Bleich added a data point 0.00 to Match para tone of voice – Client will match para tone of voice for 09/24/2026.

Miriam Bleich added a data point 4.00 to Client will decrease frequency of non-compliance in session for 09/24/2026.

Miriam Bleich added a data point 100.00 to To increase imitation client will imitate a two step gross motor direction for 09/24/2026.

Miriam Bleich added a data point 63.64 to To decrease latency client will tact if he started a task fast or slow for 09/24/2026.

Miriam Bleich added a data point 33.33 to To decrease latency client will repeat a task 'faster' with decreased latency from instruction when he did it slow the first time for 09/24/2026.

Miriam Bleich added a data point 2.00 to Client will decrease frequency of ignoring/not responding to instructions or questions for 09/24/2026.

Miriam Bleich added a break entry called "Intervention" from 9/24/2026 11:34 AM to 9/24/2026 11:34 AM to data tracking **To increase imitation client will imitate a two step gross motor direction** part of Shea Freund's learning tree **Shea Freund** .

Miriam Bleich added a break entry called "Intervention" from 9/24/2026 11:34 AM to 9/24/2026 11:34 AM to data tracking **Client will identify (listener responding) an item that is wet/ dry in a field of 2.** part of Shea Freund's learning tree **Shea Freund** .

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from

the date of service.

Session Summary

Patient transitioned well into today's session.

Some of the goals worked on today were:

" Client will decrease frequency of ignoring/not responding to instructions or questions ", patient required verbal prompting with this goal. "To decrease latency client will repeat a task 'faster' with decreased latency from instruction when he did it slow the first time ", patient required modeling with this goal. "To decrease latency client will tact if he started a task fast or slow", patient required verbal prompting with this goal. "To increase imitation client will imitate a two step gross motor direction", patient required modeling with this goal. "Match para tone of voice – Client will match para tone of voice", patient required verbal prompting with this goal. "Match para voice volume – Client will match para voice volume", patient required verbal prompting with this goal. "To increase intraverbal skills client will be able to answer a question about two uses of the same item ", patient required no prompting with this goal. "Client will decrease frequency of non-compliance in session ", patient required verbal prompting with this goal. "Client will identify (listener responding) an item that is big/ small in a field of 2. ", patient required no prompting with this goal. "Client will identify (listener responding) an item that is wet/ dry in a field of 2. ", patient required modeling with this goal.

Shea followed through with directives for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Shea responded well to the ABA techniques used during this session.

Goals

The data points below represent a percentage of trials and/or a total frequency.

Faigy Landau added a data point 100.00 to To increase manding for attention client will mand by calling BT's name when BT is distracted or doing something else to get attention for 09/24/2026.

Faigy Landau added a data point 50.00 to To increase manding for attention client will mand by calling an individuals name when they are distracted to get attention for 09/24/2026.

Faigy Landau added a data point 100.00 to To increase manding client will mand for more information if task she was given is less preferred for 09/24/2026.

Faigy Landau added a data point 100.00 to To increase self-advocacy skills, client will communicate when she needs assistance, additional time, or a different explanation during a task for 09/24/2026.

Faigy Landau added a data point 100.00 to To increase communication skills, client will adjust the amount and type of information shared based on the listener for 09/24/2026.

Faigy Landau added a data point 100.00 to To increase problem-solving skills, client will identify a problem in session for 09/24/2026.

Faigy Landau added a data point 50.00 to To increase problem-solving skills, client will identify a solution to the problem she stated for 09/24/2026.

Faigy Landau added a data point 50.00 to To increase problem solving, client choose a solution from a choice of two (ex: to call the store before or to go without calling) for 09/24/2026.

Faigy Landau added a break entry called "Maintenance" from 9/24/2026 11:48 AM to 9/24/2026 11:48 AM to data tracking

To increase self-advocacy skills, client will communicate when she needs assistance, additional time, or a different explanation during a task part of Charny Gluck's learning tree **Charna Gluck** .

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Goals

The data points below represent a percentage of trials and/or a total frequency.

Yides Ekstein added a data point 0.00 to Reduce occurrences of tantrums for 09/24/2026.

Yides Ekstein added a data point 0:00 to Reduce duration of tantrum for 09/24/2026.

Yides Ekstein added a data point 75.00 to To increase intraverbals, client will answer correctly yes/no, when asked "are you playing/ eating... (cookie), with the visual (item) present. for 09/24/2026.

Yides Ekstein added a data point 33.33 to To increase manding skills, client will mand "close/ open" accurately (he will not mix up the two actions) for 09/24/2026.

Yides Ekstein added a data point 0.00 to Reduce frequency saying "no" and refusing for more than 2 seconds for 09/24/2026.

Yides Ekstein added a data point 0.00 to Reduce episodes of silly behavior (episode ends when no silly behavior occurs for 30 seconds) for 09/24/2026.

Yides Ekstein added a data point 100.00 to To increase listener responding, client will complete a direction from across the room, without needing BT to accompany him, such as bringing or putting an item from across the room. for 09/24/2026.

Yides Ekstein added a data point 100.00 to To increase visual perception and matching skills, client will match non identical pictures to each other, in an array of 6-8 (ex. Picture of car to a different picture of car). for 09/24/2026.

Yides Ekstein added a data point 100.00 to To increase tacting skills, client will tact "big" for 09/24/2026.

Yides Ekstein added a data point 100.00 to To increase intraverbals/ conversation skills, client will list 2-3 items from a specific category when asked "what do you like to... eat/ play/ drink etc." for 09/24/2026.

Yides Ekstein added a data point 87.50 to To increase commenting skills, when commenting, client will spontaneously use a 2-3 word phrase to get his listener to understand him better. for 09/24/2026.

Yides Ekstein added a data point 100.00 to To reduce attention maintained behavior, client will wait 1 minutes while BT is "busy" without maladaptive behaviors including tantrum or accidents for 09/24/2026.

Yides Ekstein added a data point 100.00 to To increase listener responding by feature, function, and class, client will select the picture that we eat/drink/drive. for 09/24/2026.

Yides Ekstein added a data point 77.78 to To increase visual perception/ matching skills, client will match the picture to the correct category. for 09/24/2026.

Yides Ekstein added a data point 87.50 to To increase tacting, client will label the category of items by function or class. for 09/24/2026.

Yides Ekstein added a data point 75.00 to To reduce excessive silly behavior, client will learn to "wait" for 1 minute when no attention or occupation are provided. for 09/24/2026.

Yides Ekstein added a break entry called "Intervention" from 9/24/2026 11:34 AM to 9/24/2026 11:34 AM to data tracking **To increase intraverbals/ conversation skills, client will list 2-3 items from a specific category when asked \"what do you like to... eat/ play/ drink etc.\"** part of Shaya Herskovic's learning tree **Shaya Hershkovic** .

Yides Ekstein added a break entry called "Maintenance" from 9/24/2026 11:34 AM to 9/24/2026 11:34 AM to data tracking **To increase listener responding, client will complete a direction from across the room, without needing BT to accompany him, such as bringing or putting an item from across the room.** part of Shaya Herskovic's learning tree **Shaya Hershkovic** .

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"To reduce excessive silly behavior, client will learn to "wait" for 1 minute when no attention or occupation are provided.", patient required verbal prompting with this goal. "To increase tacting, client will label the category of items by function or class. ", patient required verbal prompting with this goal. "To increase visual perception/ matching skills, client will match the picture to the correct category. ", patient required verbal prompting with this goal. "To increase listener responding by feature, function, and class, client will select the picture that we eat/drink/drive. ", patient required verbal prompting with this goal. "To reduce attention maintained behavior, client will wait 1 minutes while BT is "busy" without maladaptive behaviors including tantrum or accidents ", patient required verbal prompting with this goal. " To increase commenting skills, when commenting, client will spontaneously use a 2-3 word phrase to get his listener to understand him better. ", patient required verbal prompting with this goal. "To increase intraverbals/ conversation skills, client will list 2-3 items from a specific category when asked "what do you like to... eat/ play/ drink etc.", patient required verbal prompting with this goal. "To increase tacting skills, client will tact "big"", patient required verbal prompting with this goal. "To increase visual perception and matching skills, client will match non identical pictures to each other, in an array of 6-8 (ex. Picture of car to a different picture of car).", patient required verbal prompting with this goal. "To increase listener responding, client will complete a direction from across the room, without needing BT to accompany him, such as bringing or putting an item from across the room.", patient required verbal prompting with this goal. "To increase intraverbals, client will answer correctly yes/no, when asked "are you playing/ eating... (cookie), with the visual (item) present.", patient required verbal prompting with this goal. "To increase manding skills, client will mand "close/ open" accurately (he will not mix up the two actions)", patient required verbal prompting with this goal.

Shaya engaged with session for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Shaya responded well to the ABA techniques used during this session.

Plan of Care: Continue behavior analytic treatment as prescribed

Goals

The data points below represent a percentage of trials and/or a total frequency.

Gitty Schonbrun added a data point 0:00 to Reduce Duration of Tantrum Behavior for 09/24/2026.

Gitty Schonbrun added a data point 0.00 to Reduce Occurrences of Tantrum for 09/24/2026.

Gitty Schonbrun added a data point 50.00 to To increase manding skills, client will mand "close/ open" accurately (he will not mix up the two actions) for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase intraverbals, client will answer correctly yes/no, when asked "is this a..." for 09/24/2026.

Gitty Schonbrun added a data point 2.00 to Reduce frequency saying "no" and refusing to comply longer than 5 seconds. for 09/24/2026.

Gitty Schonbrun added a data point 0.00 to Reduce episodes of silly/ stereotypical behavior (episode ends when no silly behavior occurs for 30 seconds) for 09/24/2026.

Gitty Schonbrun added a data point 75.00 to To increase listener responding, client will complete a direction to get/ put away an item across the room (without para accompanying him). for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase intraverbals and recalling, client will answer a question about something he ate/ played/ did 1-2 minutes ago. for 09/24/2026.

Gitty Schonbrun added a data point 66.67 to To increase intraverbals skills, client will discriminate between a "who/what/where" question in a story or natural environment, and respond correctly. For example, where is the baby sleeping, who is sleeping in the crib etc. for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To reduce tantrum behavior, client will tolerate being told "no" when given alternative options. for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase joint attention and reduce rigid behaviors, client will maintain active participation when BT introduces variations and/ or changes w/reinforcement present for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase joint attention, during a joint activity with BT, client will notice and follow a point (without verbal cue) to retrieve a needed item for play. for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase joint attention and social awareness, client will spontaneously tact an interesting or novel item in his environment, for social attention (ex. An airplane, noise of a fire truck). for 09/24/2026.

Gitty Schonbrun added a data point 50.00 to To increase manding skills, client will learn to ask "where is" when looking for a preferred item, with modeling prompts. for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase intraverbals, client will answer correctly yes/no, when asked "can you eat this" for 09/24/2026.

Gitty Schonbrun added a data point 50.00 to To increase manding skills, client will learn to ask "where is" when looking for a preferred item, with modeling prompts. for 09/24/2026.

Gitty Schonbrun added a data point 100.00 to To increase manding skills, client will ask (approximate) "can I have...", when motivated for an item that is not in reach and/or out of routine, with modeling prompts. for 09/24/2026.

Gitty Schonbrun added a data point 50.00 to To increase intraverbals/ conversation skills, client will answer who/what/where questions without visuals (ex. "who goes on the bus? Where do you sleep? What flies in the sky). for 09/24/2026.

Gitty Schonbrun added a break entry called "Maintenance" from 9/24/2026 1:02 PM to 9/24/2026 1:02 PM to data tracking **To increase intraverbals, client will answer correctly yes/no, when asked "can you eat this"** part of Shea Herskovic's learning tree **Shea Herskovic**.

Gitty Schonbrun added a break entry called "Generalization" from 9/24/2026 1:02 PM to 9/24/2026 1:02 PM to data tracking **To reduce tantrum behavior, client will tolerate being told "no" when given alternative options.** part of Shea Herskovic's learning tree **Shea Herskovic**.

Gitty Schonbrun added a break entry called "Maintenance" from 9/24/2026 1:02 PM to 9/24/2026 1:02 PM to data tracking **To increase intraverbals, client will answer correctly yes/no, when asked "is this a..."** part of Shea Herskovic's learning tree **Shea Herskovic**.

Gitty Schonbrun added a break entry called "Intervention" from 9/24/2026 1:02 PM to 9/24/2026 1:02 PM to data tracking **To increase intraverbals and recalling, client will answer a question about something he ate/ played/ did 1-2 minutes ago.** part of Shea Herskovic's learning tree **Shea Herskovic**.

Goals

The data points below represent a percentage of trials and/or a total frequency.

Malka Leitner added a data point 0.00 to Reduce Touching Others to 0 for 09/24/2026.

Malka Leitner added a data point 4.00 to Reduce Hands Under Clothing to 0 for 09/24/2026.

Malka Leitner added a data point 60.00 to Reduce rigid behavior: client will comply to an easy demand or question without losing interest in the activity for 09/24/2026.

Malka Leitner added a data point 7.00 to Reduce Eating Nonfood Items to 0 for 09/24/2026.

Malka Leitner added a data point 1.00 to Reduce Off Topic Comments To 0 for 09/24/2026.

Malka Leitner added a data point 10.00 to Reduce occurrences of silly behavior in 1:1 setting for 09/24/2026.

Malka Leitner added a data point 80.00 to To increase manding, client will use the correct "small" word in a mand carrier phrase (ex. "you need to take the/a/ it (ball)") for 09/24/2026.

Malka Leitner added a data point 75.00 to To increase tacting, client will use correct words to show quantity (tree/ trees, foot/ feet) for 09/24/2026.

Malka Leitner added a data point 100.00 to To increase tacting, client will tact a person by her relationship (niece, cousin, uncle) for 09/24/2026.

Malka Leitner added a data point 66.67 to To increase problem solving skills, when presented with a "stuck" situation, client will come up with a possible solution. for 09/24/2026.

Malka Leitner added a data point 50.00 to To increase problem solving skills, client will identify whether the solution worked for the problem. for 09/24/2026.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"To increase problem solving skills, when presented with a "stuck" situation, client will come up with a possible solution. ", patient required least to most prompting with this goal. "To increase problem solving skills, client will identify whether the solution worked for the problem. ", patient required verbal prompting with this goal. "To increase manding, client will use the correct "small" word in a mand carrier phrase (ex. "you need to take the/a/ it (ball)") ", patient required no prompting with this goal. "To increase tacting, client will use correct words to show quantity (tree/ trees, foot/ feet)", patient required verbal prompting with this goal. "To increase tacting, client will tact a person by her relationship (niece, cousin, uncle)", patient required no prompting with this goal. "Reduce occurrences of silly behavior in 1:1 setting", patient required verbal prompting with this goal. "Reduce Eating Nonfood Items to 0", patient required verbal prompting with this goal. "Reduce Hands Under Clothing to 0", patient required verbal prompting with this goal.

Goals

The data points below represent a percentage of trials and/or a total frequency.

Pessel Goldstein added a data point 4.00 to Lazer will reduce instances of tantrum behavior for 09/24/2026.

Pessel Goldstein added a data point 5.00 to Client will reduce instances of biting behaviors for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "Mentchi" for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "Toys" for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "Car"-R for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "yogurt" for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "BAYnkul for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Client will increase echoic skills and repeat the sound "crayON" for 09/24/2026.

Pessel Goldstein added a data point 33.33 to Client will mand for a missing item, for 5 different items for 09/24/2026.

Pessel Goldstein added a data point 66.67 to Client will independently mand for a desired present item for 09/24/2026.

Pessel Goldstein added a data point 66.67 to Client will mand for an item, while FACING BT for 09/24/2026.

Pessel Goldstein added a data point 50.00 to Client will mand for action-open for 09/24/2026.

Pessel Goldstein added a data point 75.00 to Client will point to the correct clothing item or body part on a coloring sheet, when named by BT for 09/24/2026.

Pessel Goldstein added a data point 8.00 to Client will reduce the frequency eloping for 09/24/2026.

Pessel Goldstein added a data point 50.00 to Client will mand using two words-echoic prompt for 09/24/2026.

Pessel Goldstein added a data point 100.00 to When asked, "What is this?", client will tact the name of an object, for 5 different objects. for 09/24/2026.

Pessel Goldstein added a data point 66.67 to Client will make one comment to a peer, throughout each 15 minute play or mealtime activity-Prompt for 09/24/2026.

Pessel Goldstein added a data point 75.00 to Client will follow a non-familiar two-step related direction for 09/24/2026.

Pessel Goldstein added a data point 100.00 to Lazer will increase echoic skills and repeat the sound "Shloimy" for 09/24/2026.

Pessel Goldstein added a data point 6.00 to Lazer will decrease the frequency of aggression for 09/24/2026.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"Lazer will increase echoic skills and repeat the sound "Shloimy"", patient required verbal prompting with this goal. "Client will follow a non-familiar two-step related direction", patient required verbal prompting with this goal. "Client will mand using two words-echoic prompt ", patient required verbal prompting with this goal. "Client will make one comment to a peer, throughout each 15 minute play or mealtime activity-Prompt", patient required verbal prompting with this goal. "When asked, "What is this?", client will tact the name of an object, for 5 different objects.", patient required verbal prompting with this goal. "Client will mand for action-open", patient required verbal prompting with this goal. "Client will mand for an item, while FACING BT", patient required verbal prompting with this goal. "Client will independently mand for a desired present item", patient required verbal prompting with this goal. "Client will mand for a missing item, for 5 different items", patient required verbal prompting with this goal. "Client will reduce the frequency eloping", patient required verbal prompting with this goal. "Client will increase echoic skills and repeat the sound "crayON"", patient required verbal prompting with this goal. "Client will increase echoic skills and repeat the sound "BAYnkuI", patient required verbal prompting with this goal.

Lazer followed through with directives for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Lazer responded well to the ABA techniques used during this session.

Plan of Care: Continue behavior analytic treatment as prescribed

Edibles

Goals

The data points below represent a percentage of trials and/or a total frequency.

Baila Reisz added a data point 5.00 to Eloping for 09/24/2026.

Baila Reisz added a data point 5.00 to Biting for 09/24/2026.

Baila Reisz added a data point 50.00 to Client will increase echoic skills and repeat the sound "YOgurt" for 09/24/2026.

Baila Reisz added a data point 100.00 to When given the verbal SD "ears", client will touch his ears for 09/24/2026.

Baila Reisz added a data point 1.00 to During a 15 minute play session, client will spontaneously tact 5 different items. for 09/24/2026.

Baila Reisz added a data point 5.00 to Tantrum for 09/24/2026.

Baila Reisz added a data point 100.00 to Client will mand using two words-echoic prompt for 09/24/2026.

Baila Reisz added a data point 66.67 to When given the verbal SD "Stomach", client will touch his stomach for 09/24/2026.

Baila Reisz added a data point 50.00 to Client will follow a one-step direction to "put away"-Toy activity for 09/24/2026.

Baila Reisz added a data point 100.00 to When shown a picture, client will tact the correct body part, when asked "What is this? and BT points to the specified body part". for 09/24/2026.

Baila Reisz added a data point 50.00 to Client will increase echoic skills and repeat the sound "Shloimy" for 09/24/2026.

Baila Reisz added a data point 3.00 to Solomon will decrease frequency of aggression for 09/24/2026.

Please note: break entries occur when a goal auto progresses from one phase to another based on data taken throughout the session. This may result the date of the break entry to differ from the date of service.

Session Summary

Patient was excited to see me at the start of the session.

Some of the goals worked on today were:

"Solomon will decrease frequency of aggression", patient required verbal prompting with this goal. "Client will increase echoic skills and repeat the sound "Shloimy"", patient required verbal prompting with this goal. "Client will mand using two words-echoic prompt", patient required verbal prompting with this goal. "Client will follow a one-step direction to "put away"-Toy activity", patient required partial physical prompting with this goal. "When shown a picture, client will tact the correct body part, when asked "What is this? and BT points to the specified body part".", patient required most to least prompting with this goal. "When given the verbal SD "Stomach", client will touch his stomach", patient required modeling with this goal. "When given the verbal SD "ears", client will touch his ears", patient required modeling with this goal. "During a 15 minute play session, client will spontaneously tact 5 different items.", patient required verbal prompting with this goal. "Tantrum", patient required no prompting with this goal. "Client will increase echoic skills and repeat the sound "YOgurt"", patient required no prompting with this goal. "Biting", patient required no prompting with this goal. "Eloping", patient required no prompting with this goal.

Solomon engaged with session for the length of the session.

I implemented the strategies outlined in the patient's behavior plan

Solomon responded well to the ABA techniques used during this session.
